SUMMARY

AI Engineer with 2 years of Python development experience and hands-on expertise building Generative AI, Agentic AI, Natural Language Processing (NLP), and Retrieval-Augmented Generation (RAG) applications. Skilled in designing multi-agent workflows, LLM-powered systems, prompt engineering, deep learning, and machine learning pipelines using LangChain, LangGraph, CrewAI, PyTorch, and Scikit-learn. Currently pursuing a Post Graduate Diploma in AI/ML & Agentic AI Engineering at IIT Gandhinagar.

EDUCATION

IIT Gandhinagar

Feb 2026 – Jul 2026

Post Graduate Diploma - AI/ML & Agentic AI Engineering

Dr. APJ Abdul Kalam Technical University

Aug 2016 – Oct 2020

Bachelor of Technology - Electronics & Communication Engineering

TECHNICAL PROJECTS

Solace Health — Clinical Evidence Research Assistant 🐙 [GitHub](#) 🌐 [Live Demo](#)

Technologies: Python, LangGraph, CrewAI, Qdrant, RAGAS

- Built a multi-agent AI pipeline using LangGraph and CrewAI for biomedical evidence retrieval, appraisal and summarization.
- Designed a Qdrant-backed RAG pipeline to ground responses in peer-reviewed clinical literature.
- Used the RAGAS framework to evaluate retrieval quality, optimize prompts and reduce hallucinations.
- Deployed the application on Render, enabling end-to-end access to the multi-agent clinical evidence research assistant through a live web interface.
- Presented the system architecture and evaluation results during the academic capstone defense.

NCERT Class 9 Science QA Chatbot 🐙 [GitHub](#)

Technologies: Python, LangChain, ChromaDB, Groq, Llama 3, BGE-large, Cross Encoder, Streamlit

- Developed an end-to-end Retrieval-Augmented Generation (RAG) chatbot using LangChain, Groq-hosted Llama 3 and ChromaDB to answer questions from 12 NCERT Science chapters.
- Built a complete retrieval pipeline comprising document ingestion, custom PDF extraction, tokenization, semantic chunking, BGE-large embeddings and storage of 700+ document chunks.
- Implemented a retrieve → re-rank → generate workflow using dense retrieval, Cross Encoder re-ranking, query rewriting, prompt templates, retrieval evaluation and hallucination monitoring to generate grounded responses with source citations.

Customer Intelligence Platform 🐙 [GitHub](#)

Technologies: Python, FastAPI, LangChain, FAISS, Gemini Embeddings, XGBoost, MLflow

- Developed an AI-powered application combining Machine Learning and Retrieval-Augmented Generation (RAG) to analyze 5,000+ customer complaint records.
- Designed a semantic retrieval pipeline using Gemini embeddings, FAISS vector indexing, hybrid search, prompt templates and dynamic query rewriting.
- Integrated an XGBoost classification model with the RAG workflow through a unified FastAPI service and leveraged MLflow for experiment tracking and evaluation.

PROFESSIONAL EXPERIENCE

Capgemini

Mar 2025 – Aug 2025

Python Developer — Pune, India

- Prototyped an LLM-based classification script using prompt engineering to auto-categorize and prioritize incoming support tickets, improving triage speed for the support team.
- Diagnosed, debugged, and refactored Python application logic to resolve 200+ software defects, improving application stability and code quality.
- Debugged and enhanced Python modules by implementing 50+ change requests and bug fixes, reducing recurring production issues by 30%.
- Performed production support, root cause analysis, and issue resolution for high-priority incidents, maintaining a 98%+ on-time resolution rate.

Vaco Binary Semantics LLP

Nov 2023 – Oct 2024

Associate Analyst — Gurugram, India

- Applied LLM-assisted coding tools (GitHub Copilot) and prompt-driven workflows to accelerate debugging and code refactoring across legacy Python modules.
- Maintained and enhanced three business-critical Python applications used by 20+ daily users, improving application performance and reducing downtime by 30%.
- Developed and maintained Python scripts to automate repetitive support tasks, reducing manual effort by 35%.

Infoxen Technologies

Jun 2023 – Oct 2023

Software Developer — Noida, India

- Found and fixed errors in Python code to keep the company's applications running smoothly for daily use.
- Investigated and resolved production issues using Python and SQL, reducing average issue resolution time by 25%.
- Helped maintain existing applications by updating code, testing changes, and fixing small bugs reported by users.

TECHNICAL SKILLS

Generative AI: Large Language Models (LLMs), NLP, Deep Learning, Prompt Engineering, LoRA Fine-tuning, Tokenization, Open-Source LLMs (Llama 3, Qwen 2.5, Gemma)

LLM Frameworks & APIs: LangChain, LangGraph, CrewAI, Hugging Face, FastAPI, REST APIs

Agentic AI: Multi-Agent Systems, Agent Orchestration, Tool Calling, Reasoning Workflows, Model Context Protocol (MCP)

RAG & Retrieval: Retrieval-Augmented Generation (RAG), Hybrid Search, Semantic Search, Query Rewriting, Re-ranking, RAGAS Evaluation, Hallucination Detection, Guardrails

Vector Databases: FAISS, ChromaDB, Qdrant

Machine Learning: PyTorch, Scikit-learn, XGBoost, Pandas, NumPy, Model Training & Evaluation, Feature Engineering, ML Pipeline

Languages: Python, SQL

Cloud & MLOps: Azure AI Studio, Azure OpenAI, Azure AI Foundry, MLflow, Docker, Git

Developer Tools: VS Code, Jupyter Notebook, Streamlit, Pytest

CERTIFICATIONS

- Anthropic — Introduction to Model Context Protocol (MCP)
- BCG — GenAI Job Simulation (Forage)
- IBM — Data Engineering Foundations Specialization
- Jobaaj — Applied Data & Business Analytics Micro-Degree
- CodeChef — Advanced Python, Advanced SQL, GitHub, NumPy, Pandas
